# Transient Behavior Verifier (Tool)

# Using the Transient Behavior Verifier

```
"specification": "always((response_time_high(rt)  
-> (once[0,30] (scaled_up(scaling1) or scaled_up(scaling2)  
or (not response_time_high(rt)))))",  
"specification_type": "mtl",  
"future-mtl": "true",
```

If  $\{RT > 1s\}$  has occurred then in response  $scaled\_up$  or  $(not RT > 1s)$  eventually holds within 30 time units.

 Transient Behavior Hypothesis

 Data Source Description

Verifier

# Tool Demo

## Welcome to the Transient Behavior Verifier!

Please select one of the actions below:

### Create Transient Behavior Specification

This allows you to create your own transient behavior specification in the JSON format used by the verifier.

[Create Specification](#)

### Create Chaos Experiment

This allows you to place a transient behavior requirement check in an already existing Chaos Experiment. Currently supports Chaos Toolkit experiments.

[Create Experiment](#)

### Verify Behavior Specification

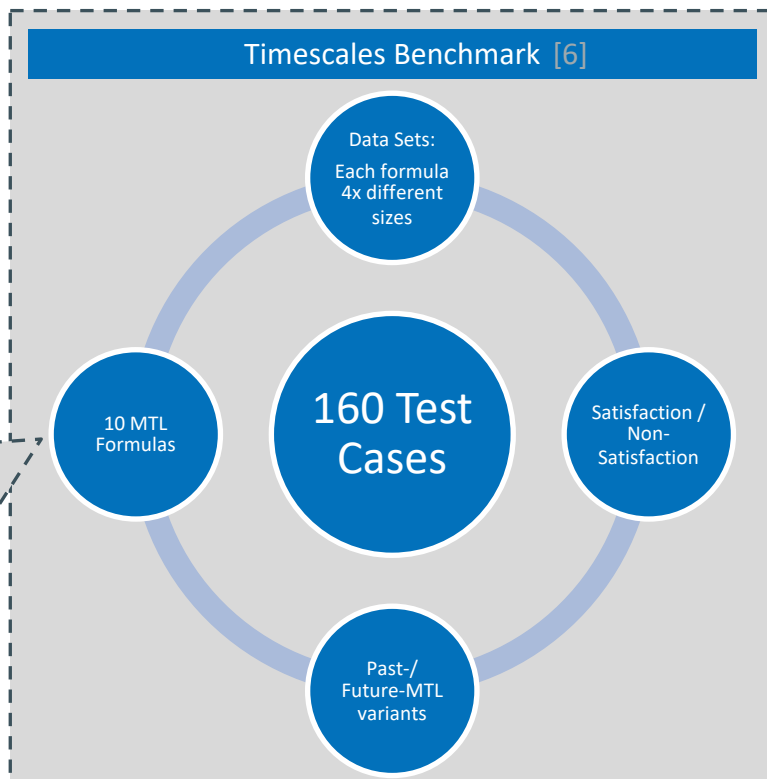

This allows you to verify an existing specification without using a Chaos Experiment. Simply paste your specification and verify it.

[Verify Specification](#)

# Evaluation: Verification Correctness

Only 4 PSP types

Pattern	Scopes
Absence	3
Universality	3
Recurrence	2
Response	2

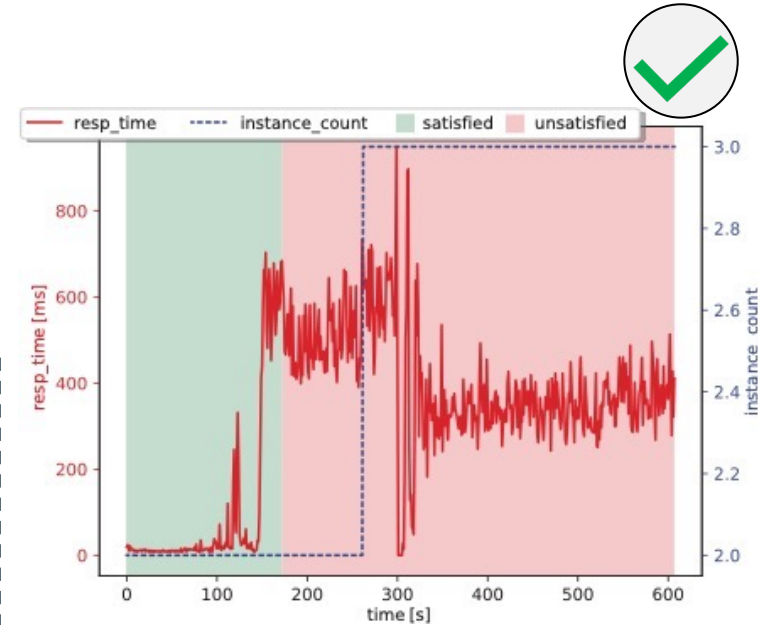

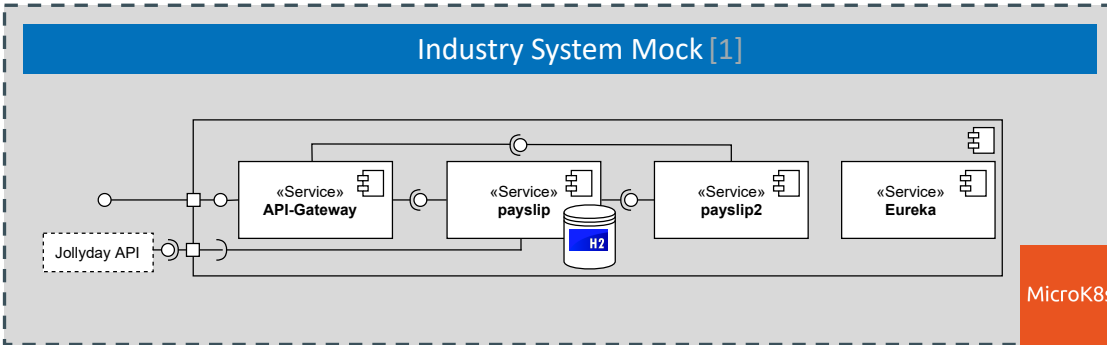

**Transient Behavior Verifier**

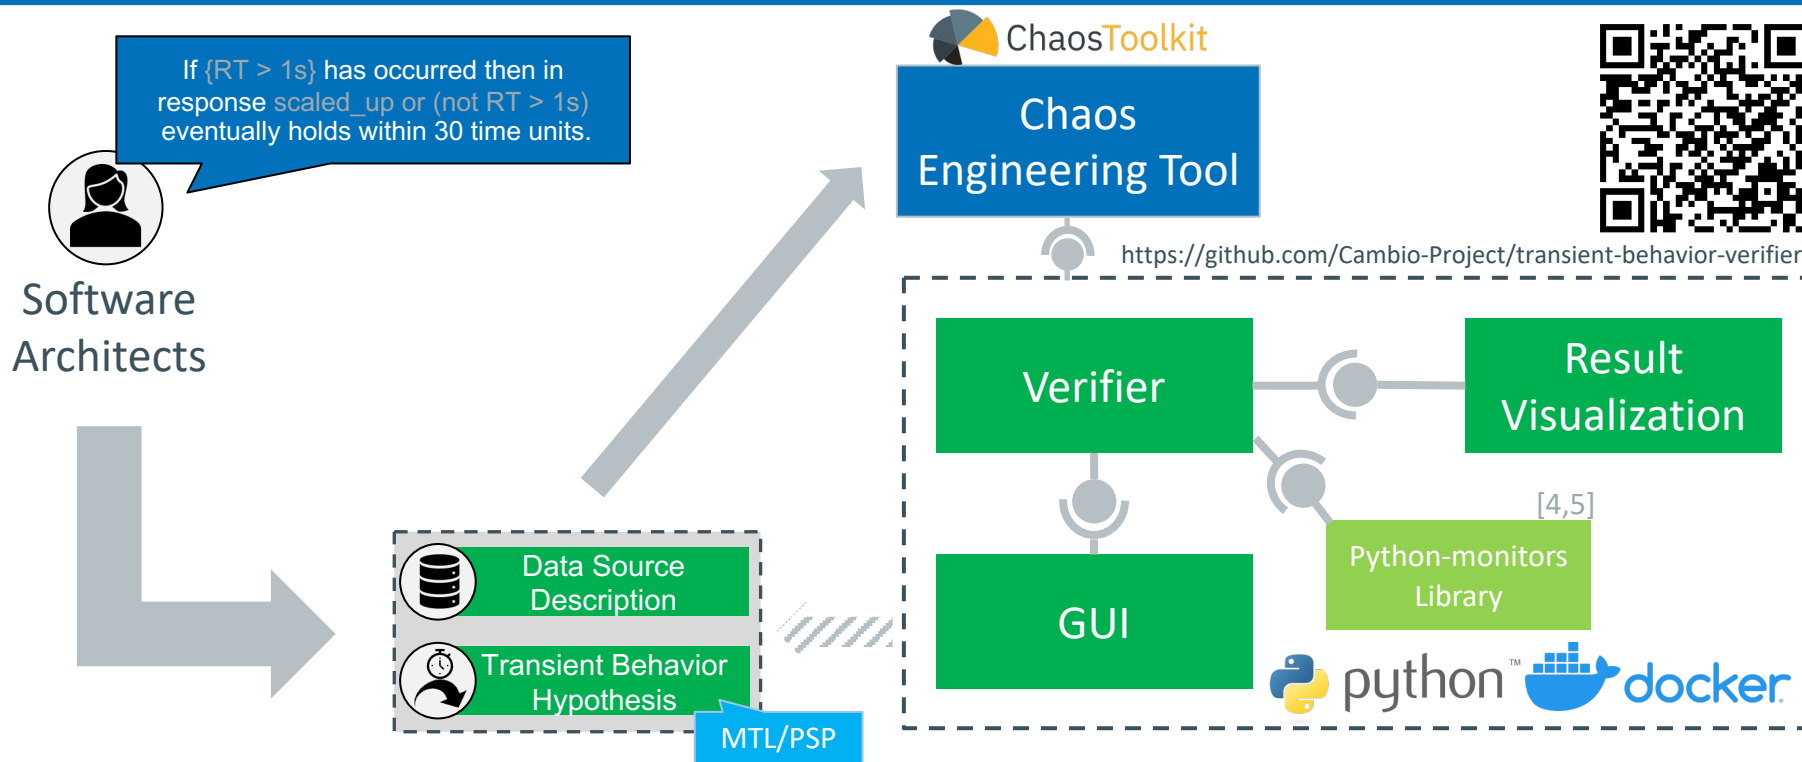

# Evaluation: Applicability in Chaos Experiments

	Chaos Experiment #1	Chaos Experiment #2	Chaos Experiment #3
<b>Fault</b> [1]	Instance Crash	Workload Increase	Workload Increase
<b>Steady-State Hyp.</b>	Depl. fully available	Depl. fully available	Depl. fully available
<b>Transient-State Hyp.</b>	New Instance in <30s; RT < 100ms	When RT > 150ms: new instance in 30-60s	Pod CPU usage <80%
<b>Specification Type</b>	Past-MTL	PSP	Past-MTL
<b>Monitoring</b>	InfluxDB	InfluxDB	Prometheus
